

CLEAR CELL™

Brunnings Clear Cell is the ultimate propagation kit for plants with deeper root systems. The deeper Clear Cells enable plants to grow bigger before they need to be transplanted into the garden. This maximises the chances of growing bigger, healthier vegetable, herb or flowering plants.

Location

If your Clear Cell Kit is being kept outside, then we recommend that you do not use the Humidity Dome in warmer weather once seed has germinated.

If mainly kept indoors, we recommend that you at least weekly put your Clear Cell tray outside in a protected sunny location for a few hours.

Extracting Your Plant

Removing your plant is a breeze with Clear Cell. Remove the Deep Cell (4 pack) from the Propagation Tray. Lie the unit down flat and gently open one side exposing the compressed soil and root system.

Remove the plant and root system from each cell and replant in its new location without disturbing the root system.

Then simply rinse the Cells with clean water and start the planting process again.

Watering

After planting seeds, water the Clear Cell gently. Excess water will drain out the bottom.

Water according to the seed instructions.

DO NOT over water as this may cause the seed and plant to rot.

Easy To Follow Steps

Planting

Remove the flattened Deep Cell units from the Propagation Tray.

Press open each drainage holes from the middle of the Deep Cell.

Bring each side of the Deep Cell together and press in the studs to complete the cells.

Plant seeds into each cell according to the packet seed instructions. Make sure they are covered by approx. 5mm of mix.

Stand up the planted cells into Propagation Tray.

Place the Humidity Dome on the Propagation Tray to retain moisture and create a warm growing environment.

To extract your plants from the Deep Cells, please see instructions to the right.
